Synonyms

Expression System Human embryonic kidney 293 (HEK293) cells

Tag N-terminal his-tag

Unpurified cell culture supernatant. HEK293 cells grown in serum-free medium were transfected with expression vector harboring target gene. The cell culture was harvested with centrifugation to remove cells. The cell culture supernatant containing mammalian cell protease inhibitor cocktail was aliquoted and stored at -80 °C immediately. The gene overexpression in culture

supernatant was confirmed by Western blotting using anti-His tag antibody and/or target-specific antibodies and the culture supernatant derived from HEK293 cells transfected with the empty

expression vector was used as a negative control.

Molecular Weight

Recombinant protein product has a calculated molecular mass of 19. The actual molecular

weight may increase slightly due to the potential post-translational modifications (PTMs).
